

## Getting More Information About Your Trip

You can always get more information about your trip by tapping **Menu** from the navigation screen. The navigation screen curls upward and shows a set of options you can select to get more information about your trip.

Tap **Talk** to listen to the next upcoming spoken route direction

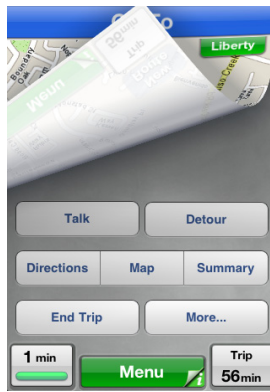

Tap **Directions** to see a list of all steps in your route

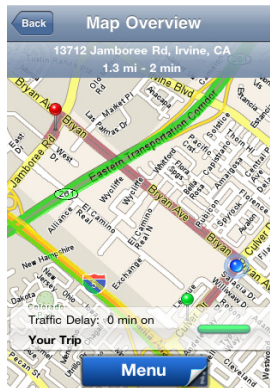

Tap **End Trip** to cancel your trip

Tap **More** to recalculate your route

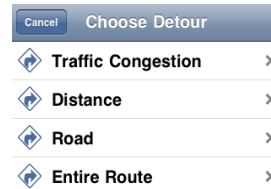

Tap the Traffic bar to see a list of detour options

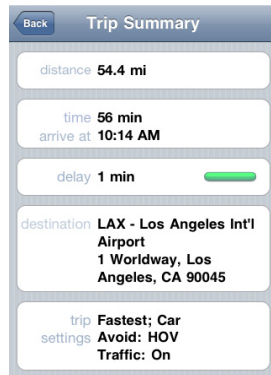

Tap **Map** to see your entire route on a map

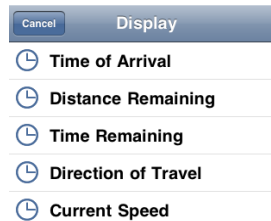

Tap **Detour** for alternative routes around congestion

Tap **Summary** to see a summary of your trip

Tap Information button for other display options

# Quick Start Guide

## Setting Up Gokivo Navigator

Set up your iPhone and select your personal preferences for trips with Gokivo Navigator.

### Set Location Services to ON

Verify that your iPhone's GPS Location Services are turned on.

1. Tap **Settings** from the Home screen.
2. Tap **General** from the Settings screen.
3. Verify the **Location Services** setting is **ON**.

### Set Your Gokivo Navigator Preferences

Set your personal preferences that determine how Gokivo creates routes for your trips. You can set your route preferences from iPhone **Settings** or by selecting **Settings** from the Gokivo More screen.

1. Tap **Settings** from your iPhone Home screen to show a list of settings.
2. Scroll the list and tap **Gokivo** to show the Gokivo Settings screen.
3. Tap **Route Type** and select the type of routes you want for your trips.
  - **Fastest:** Gokivo Navigator calculates a route that should get you to your destination in the quickest time.
  - **Shortest:** Gokivo Navigator calculates the shortest route to your destination.
  - **Simplest:** Gokivo Navigator calculates routes with the fewest turns and roads.
4. Tap **Vehicle Type** and select **Car**, **Truck**, or **Bicycle** as the vehicle for your trips.
5. Tap **Avoid** and select the types of roads you want to avoid travelling on. If possible, Gokivo creates routes without travelling on roads you want to avoid.
6. Slide **Traffic Alerts ON** or **OFF** to select whether you want to be notified when there are traffic delays on your routes or not.

### Adjust Your iPhone Volume Control

Adjust the volume control to easily hear Gokivo Navigator's spoken directions.

1. Tap **Gokivo** from the iPhone Home screen to start Gokivo Navigator.
2. Tap **Accept** from the pop-up window.

You see a map with a blue button that shows your current location and the iPod volume control near the top left corner of the map.

3. Tap the iPod control and adjust the volume slider.

## Searching for Locations

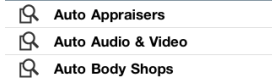

Typically, you calculate a route for your trips by first selecting a destination from the results of a search from Gokivo Navigator.

1. Start Gokivo Navigator.
2. Tap the **Search** field above the map to show a list of search options.
3. Tap the search option (1-7) you want to use from the Search list.

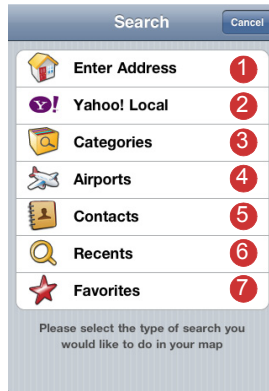

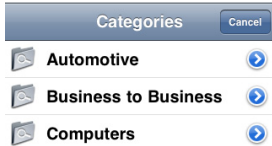

1  
Type the address of the location you are searching for

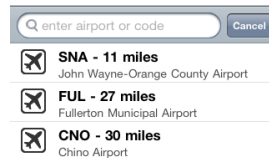

2  
Type the first few letters of a business name or business category

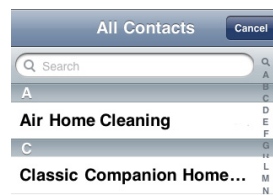

3  
Select from the list of Yahoo! Local Search categories

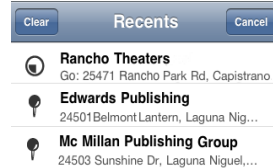

4  
Select from the list that shows the nearest airports or type the name of the airport or its 3-character code

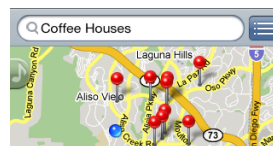

5  
Select from personal contacts saved to your iPhone

6  
Select from a list of your recent Gokivo searches

7  
Select from your list of saved Gokivo Favorites

4. Type or select an item from a search option list.
5. If necessary, tap **Search** to start your search.  
You see a map with one or more pins that identify possible locations that match your search criteria.

6. Tap the **List View** icon next to the **Search** field to see a list of items shown on the map that are ordered by their distance from your current location.

You can select a map pin or an item from the List View as the destination for your trip.

## Travelling with Gokivo Navigator

Gokivo shows your route to a destination and gives you visual and voice turn-by-turn directions that include spoken street names for every step in your route.

1. Conduct a search for the destination of your trip.
2. Select your destination from the List View or by tapping a map pin.  
If you want to get more details about your destination, tap the arrow icon on the pin label.
3. Tap **Go** on the destination label or tap an item from the List View to start your trip.
4. After the first map appears, start driving to your destination by following spoken and visual map directions.

## Getting a Detour

You can request a detour if Gokivo announces your route is significantly delayed or you see the map traffic bar is no longer green.

1. Tap the traffic bar on your navigation screen or Detour when you see traffic delays ahead during a trip.

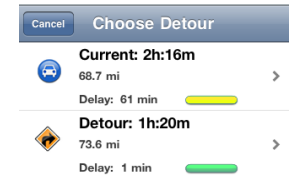

- The **Choose Detour** screen appears with options to avoid the detour portion of your route.
- **Traffic Congestion:** Gokivo automatically recalculates another route around traffic congestion.
  - **Distance:** Select the distance on the route to detour around (1, 2, 5 miles).
  - **Road:** Select a road from the route to detour around.
  - **Entire Route:** Gokivo recalculates a complete new route to the destination.

2. If you select **Road**, you see a trip summary that shows all roads on your route with expected delays in minutes.

3. Select the road you want to detour around.

Gokivo calculates another route to avoid the road and shows a screen with options to continue on the current route or take the detour.

4. Make your choice to continue or detour and follow directions to continue your trip.
